

Meeting Minutes

Subject: RFETS D&D Characterization Protocol, Pre-Demolition Survey Plan, Facility Disposition RFCA Standard Operating Protocol, Component Removal, Size Reduction, and Decontamination RFCA Standard Operating Protocol

Date: May 22, 2000

Location: Building 060, RFETS

Attendees: Edd Kray, Steve Tarleton, Chris Gilbreath, James Hindman, Fred Gerdeman, Jeff Stevens, Gerry Kelly, Dyan Foss, John Corsi

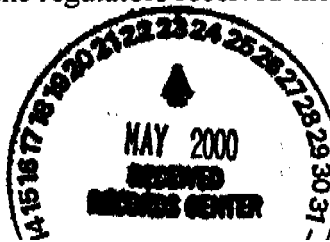

Objective of the Meeting: To go over the status of the DDCP and PDSP, obtain CDPHE comments on the Facility Disposition RSOP, and go over the significant changes to the Component Removal RSOP

Meeting was chaired by: Jeff Stevens

File: Administrative Record

The meeting was an informal roundtable in which everyone asked questions. The following is a summary of the questions/concerns asked/expressed during the meeting:

- Discussed the DDCP. It was agreed that due to the public involvement during the document development that a formal public comment period was not necessary.
- Discussed the PSDP. Agreed that the review process for this document will be similar to the DDCP. The public will be involved throughout the review and revisions process; therefore, a formal comment period will not be necessary.
- Distributed the most recent Advanced Planning document schedule. Agreed that the durations and sequencing were acceptable with one exception. The duration for the CDPHE review (activity 198) on the PDSP will be revised from 10 days to 30 days.
- Distributed the South sides foundation assessment. No questions or discussions were held. It was agreed that CDPHE would take a look at the information, and K-H will be available to them if they have any questions.
- Discussed the Facility Disposition RSOP. CDPHE distributed a draft version on their comments. Two significant issues were discussed. The first issue dealt with the requirement of additional decision documents. It was agreed that additional decision documents may be required for activities that are not addressed in the RSOPs. The second issue addressed the new ER transition section and the need to tie that into the surface water section in Section 4.0 and the surface water section in the Environmental Consequences section.
- Discussed the Component Removal RSOP. Went over the significant changes. See attached. No issues or questions were brought up. It was agreed that the public would be given a copy of the RSOP at the same time the regulators received their version.
